

Participants: Eric Mott, Ben Miller, Sam Alston, Kris Anderson

- Gave feedback for the UI prototype
 - The idea of making a side pop up menu for when the user clicks the seat, so they can add additional information if needed.
- Revised the ERD diagram
 - Converted the supertype into a better relationship because we feel this will make the database easier to use and visualize.
 - Communicated the columns for each table
 - The idea of using a .sql file to hold the records of how the layout of the library was at a given point in time.
- Made a list of questions to ask Cyril to clarify a few business rules on:
 - Rooms and areas definition clarification
 - How often are surveys recorded, and how long should we keep the older surveys.
- Had a talk about the importance of email upkeep, so that the communication of team members is strong.

- With the decision to eliminate the supertype, we were able to produce what we think is a better layout of the database that will allow us to implement every aspect of the application we need.
